

Cost & Productivity Analytics

Manufacturing organizations are focused on productivity and cost. To maintain their edge, they rely on innovative concepts such as lean manufacturing, connected factory (IoT), or supply chain automation. Carriots Analytics fosters that effort by allowing users to elevate the growing amount of collected data to insightful knowledge, through dynamic and multi-dimensional analysis in real time.

Carriots Analytics provides businesses with advanced analytics to develop detailed cost models that account for every step of the manufacturing process.

Carriots Analytics enable you to build dynamic scenario analysis models with configurable options i.e. make or buy, manufacturing locations & countries in order to optimize cost and profitability.

FEATURED APPLICATION

Altair's Cost Analytics, powered by Carriots Analytics, directly connects to PLM, ERP and other legacy systems, to retrieve key cost parameters i.e. product margins, labor cost, transportation etc., consolidating information in one common DB for analysis and optimization of target KPI's, driving increased profitability and competitiveness of your organization.
